

# IEC Low-voltage Induction Motors in Cast Iron Frames

including EU efficiency classifications

## Making you more competitive

ABB LV Motors knows about customer needs. For over 100 years we have been designing motors for every need and application. With a reputation for quality that is second to none, our offering is further complemented by our 24-hour availability, unsurpassed reliability and leading technology evident in our eBusiness solutions. For top performance and high efficiency motors combined with a unique and complete service offering, customers continually choose the ABB brand. From the most demanding industries to standard applications, our customers can rest assured that their needs are being met.

# Technical Features

---

M2QA series of three phase induction motors is a member of the ABB M2000 family with EU efficiency class. The motors are designed and manufactured according to IEC34, IEC72, DIN42673, BS4999, AS1359, GB755, GB10069, and Q/JBQS27. The electrical and mechanical performances of ABB M2QA motors are excellent.

## High efficiency

1. 1kw-90kW 2P and 4P, in S1 duty, M2QA motors are among the class 2 of CEMEP- EU standard, saving energy and operating costs.

## Voltage ranges of extra versatility

A wide range of voltages can be up to max. 690 V, for 50 Hz and 60 Hz available

## Reliable windings

To ensure long lifetime, the windings are made of the latest available materials in class F protection and temperature rise limited to class B (80k) in standard motors

## Strong corrosion protection

The motors are made to withstand aggressive environ as standard and they are designed for long lifetime. For motors with regreasing possibilities. They have strong and effective protection

against corrosion

## Bearings with high load capacity

All motors are provided with deep-groove ball bearings, the lifetime is extended. Cast iron motors in sizes 71-250 are greased for life, and those in sizes 280-355 have a regreasing device as a standard.

## Low noise level

The M2QA range has been designed with to minimize motors noise levels, by means of improving magnetic and electrical design, ventilator condition, and structure assembling size and technology.

## Additional windings protection

PTC thermistors, them-switches and Anti-condensation heaters on request.

# Mechanical Design

---

Totally enclosed fan cooled IP55  
Heavy duty design, manufactured from extra corrosion resistant cast iron materials to be used in all kind of environment. The motor is mechanically very strong and robust and as standard designed for additional energy saving through frequency converter drives. Drain holes and plugs as standard in sizes 280 to 355

Flexible cable entry direction  
Terminal boxes are mounted on the top of the motots, right or left. Terminal boxes of motor size

71-132 can rotate  $4 \times 90^\circ$  ,and those of 160-355 can rotate  $2 \times 180^\circ$  .All are easy to refit.

## Powerful refit available

The motors satisfy the requirements of a wide range of environments and applications, such as improving protection, insulation level, regreasing facilities, dust-proof, sealing rings, rainproof are available, a full range of options are listed in pages 19-20.

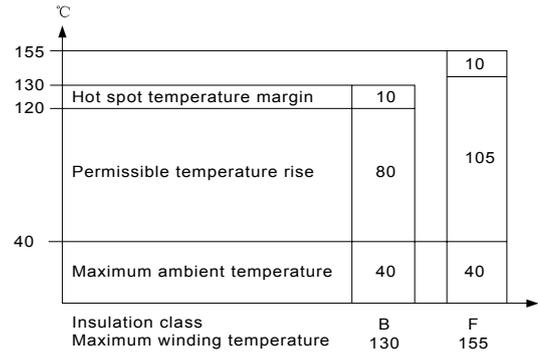

## Insulation and insulation classes

According to IEC 60085, insulating materials are divided into insulation classes. Each class has a designation corresponding to the temperature that is the upper limit of the range of application of the insulating material under normal operating condition.

The winding insulation of a motor is determined on the basis of the temperature rise in the motor and the ambient temperature. The insulation is normally dimensioned for the hottest point in the motor at its normal rated output and at ambient temperature of 40 °C. Motors subjected to ambient temperatures above 40 °C will generally have to be derated.

In most cases, the standard rated outputs of motors from ABB Motors are based on the temperature rise for insulation class B. Where the temperature rise is according to class F, this is specified in the data tables.

However, all the motors are designed with class F insulation, which permits a higher temperature rise than class B. The motors, therefore, have a generous over-load margin. If temperature rise to class F is allowed, the outputs given in the tables can generally be increased by about 12%.

Temperature limits are according to standards. The extra thermal margin when using class F insulation with class B temperature rise makes the motors more reliable.

## Motors For Other Voltages

Motors wound for a given voltage at 50Hz can also be used for other voltage. Recalculation factors for current and torque are given below; efficiency, power factor and speed remain.

approximately the same.

Guaranteed values available on request.

Motor wound for	230V	400V	500V	690V				
Connected to 50Hz	220V	230V	380V	415V	500V	550V	660V	690V
% of values at 400V, 50Hz								
Output	100	100	100	100	100	100	100	100
$I_N$	182	174	105	98	80	75	61	58

I <sub>S</sub> /I <sub>N</sub>	90	109	100
T <sub>S</sub> /T <sub>N</sub>	90	109	100
T <sub>max</sub> /T <sub>N</sub>	90	109	100

ABB Motors reserves the right to change the design, technical specification and dimensions without prior notice.

## Bearings and terminal boxes

The motors are normally fitted with single-row deep groove ball bearings as listed in the table beside. Terminal boxes are mounted on top of the motor. The terminal box of motor sizes 71 to 132 can be turned

4 x90 ° and in motors sizes 160 to 355 rotated 2 x180 °

Degree of protection of the standard terminal box is IP55. The motors are supplied with 2 cable entries as a standard according to the table below

Type	Poles	Standard bearing type D-end	bearing type N-end	Cable entry mm	Type	Poles	Standard bearing type D-end	bearing type N-end	Cable entry mm

## Rating plate

For motor sizes 71 to 132 the rating plate gives one current value for the voltage area. That is the highest current that can occur within the voltage area with the given output.

For motor sizes 160 to 355 the rating plate is in table form giving values for speed, current and power factor for six voltages.

## Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated using  $F_R$ , as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

where:

D=diameter of pulley, mm

P=power requirement, kW

n=motor speed, r/min

K=belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5.

$F_R$ =permissible radial force

## Permissible loadings on the shaft end

The tables below give the permissible radial force in Newtons, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives for motor sizes 71 to 355 of 20000 hours and 40000 hours.

Motor are foot-mounted IM B3 version with force directed sideways. In some cases the strength of

the shaft affects the permissible forces.

At 60 Hz the values must be reduced by 10%. For two-speed motors, the values must be based on the hinger speed.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

## Permissible radial forces

If the radial force is applied between points  $X_0$  and  $X_{max}$ , the permissible force  $F_R$  can be calculated from the following formula:

$$F_R = F_{X_0} - X/E(F_{X_0} - F_{X_{MAX}})$$

E=length of shaft extension in basic version

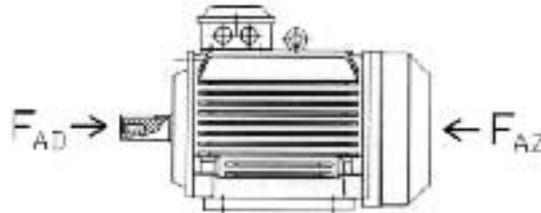

## Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing lives of 20000 and 40000 hours.

At 60 Hz the values are to be reduced by 10%

For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces  $F_{AD}$ , assumes D-bearing locked by means of locking ring.

# Ordering information

## Sample order

When placing an order, the motor type, size and product code must be specified. The product code of the motor is composed in various ways, in accordance with the following examples.

A	B	C					-	D, E, F
M2QA	100L2A	M2QA	10	1	5 10	-	A D C	
		1-4	5-6	7	8-10	11	12 13 14	

- A Motor type
- B Motor size
- C Product code
- D Mounting arrangement code
- E Voltage and frequency code
- F Generation code

## Explanation of the product code(C,D,E,F):

### Positions 1 to 4

M2QA= Totally enclosed fan cooled squirrel cage motor with cast iron frame

### Positions 5 and 6

IEC frame

07 = 71	13 = 132	25 = 250
08 = 80	16 = 160	28 = 280
09 = 90	18 = 180	31 = 315
10 = 100	20 = 200	35 = 355
11 = 112	22 = 225	

### Positions 7

Speed(pole pairs)

1 = 2poles	6 = 12poles
2 = 4poles	7 = > 12poles
3 = 6poles	8 = Two-speed motors
4 = 8poles	9 = multi-speed motors
5 = 10poles	

### Positions 8 to 10

Running number series

### Positions 11

-(dash)

### Positions 12

Mounting arrangement

- A =Foot-mounted, top-mounted terminal box
- R =Foot-mounted, terminal box on RHS, seen from D-end
- L =Foot-mounted, terminal box on LHS seen from D-end
- B =Flange-mounted, large flange
- C =Flange-mounted, small flange size(71-112)
- H =Foot-and flange-mounted

### Positions 13

Voltage and frequency code

See tables on appropriate page

### Positions 14

Generation code

C

The product code must be, if need, followed by variant codes:  
Please see pages 6-8.

# Motors for EU motor efficiency levels

A new Europe-wide agreement will ensure that the efficiency levels of electric motors manufactured in Europe are clearly displayed. In contrast to the American legislation on motor manufacturers an incentive to qualify for a higher class.

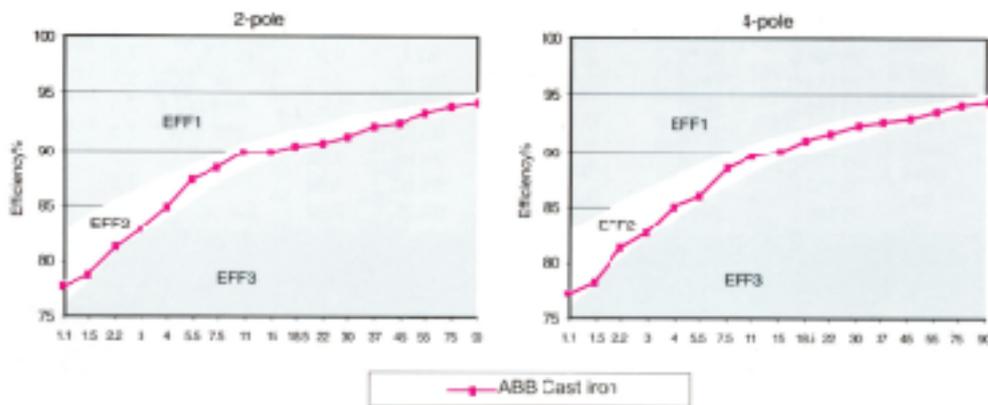

ABB is one of only a handful of leading motor manufacturers in Europe, to have a motor range to meet or exceed the minimum efficiencies stated in the highest level of the EU agreement of LV motors.

These efficiencies levels apply to 2-and-4-pole, three phase squirrel cage induction motors, rated for 400V.

50Hz, with S1 duty classes with the output 1.1 to 90kW, which account for the largest volume on the market.

The efficiency of motors from different manufacturers are collated in a database, EURODEEM, published by the European Commission, it is accessible over the Internet at <http://uamest.jrc.it/projects/eem/eurodeem.htm>.

Standard three phase induction motors, 400V 50Hz-ABB motor efficiency levels

## EU efficiency classes

## Bearing seals

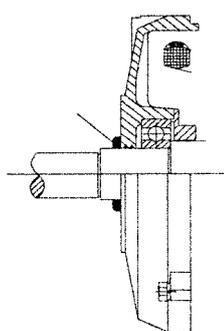

The motors are as standard provided with seals according to table below.

Motor size	Description D-end	Standard design Axial seal D-end	Alternative design Radial seal (DIN 3760) Variant code 072		
71	Sealed bearings (2RS) and axial seal, gamma ring, at D-end	RB15 x 30 x 4			
80		RB20 x 35 x 4			
90		RB25 x 40 x 4			
100		RB30 x 47 x 4.5			
112		RB35 x 52 x 4.5			
132		RB40 x 57 x 4.5			
160	Axial seal, gamma ring, at D-end	RB45 x 62 x 4.5			
180		RB50 x 70 x 5.5			
200		RB60 x 80 x 5.5			
225		RB65 x 85 x 5.5			
250	Radial seals, at both-ends		TC70 x 85 x 10		
280			TC80 x 100 x 10		
315			2p	TC80 x 100 x 10	
			4-8p	TC95 x 120 x 12	
355			2p	TC95 x 120 x 12	
			4-8p	TC95 x 120 x 12 TC110 x 140 x 12	

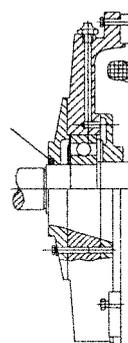

Motor sizes  
71-132

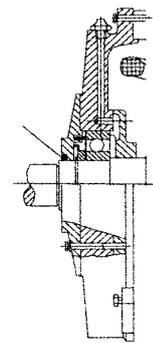

Motor sizes  
160-225

Motor size
