RFI Filters	22

Sensorless, sensored vector controlled iS5, keeps your application in more stable, durable and precise condition.

Options

Communications Board:

- RS-485
- DeviceNet
- F-Net
- ModBus-RTU
- Profibus DP
- Extended I/O Module

-Sub-A Board:

- 3 Multi-Function Input
- 3 Multi-Function Output

-Sub-B Board :

- Encoder Plus Input
- Encoder Plus Output

-Sub-C Board :

- 3 Multi-Function Input
- 3 Multi-Function Output

Aux. Analog Reference Frequency (Isolated)

Cable for Remote Keypad Operations

Dynamic Braking Units for 11~75kW Inverters

Dynamic Braking Resistors

Standard features

kW / Voltage Ratings:

- 0.75~55kW, 200-230VAC, 3 phase
- 0.75~75kW, 380-480VAC, 3 phase

Enclosure: IP00 ~ IP20

Inverter Type: PWM with IGBT

Control Method: Sensorless/Sensored Vector
1~15kHz Carrier Frequency (1~8kHz. over 30kW)
0~400Hz Output Frequency

Removable Keypad (Able to read & write parameters)

Intelligent Accel/Decel for Trip-Free Operation

Auto Tuning

8 Multi-Function Inputs

1 Multi-Function Outputs

Failure Relay

Built-in PID Control

Pre-Set Speeds

Wire Operation

Multi-step Programmable Run Patterns

Auto Torque Boost

DC Injection Braking

Stall Prevention

Built-In Braking Circuit for 0.75 ~ 7.5kW units

Application

Traverse

Draw

MMC (Mult Motor Control)

Converting

Material Handling

Web Processing

Fan/Pump Controls

Conveyors

Industrial Washing machine, etc.

Conformity to global standards

UL and cUL listed for North America

CE marked for Europe

Quality process controlled by ISO9001, ISO14000

Extended I/O boards

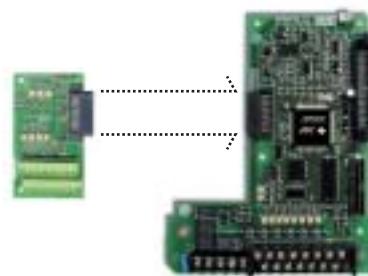

The iS5 has several additional I/O boards that can be easily mounted into the connection terminal on control board. Each I/O board is standardized for a specific I/O requirement.

The three main I/O boards are "Sub-board A", "Sub-board B" and "Sub-board C".

This helps system engineer to design most adequate and cost effective system using the exactly necessary number of I/Os and functions.

It is extendable and changeable in case of system upgrade or change.

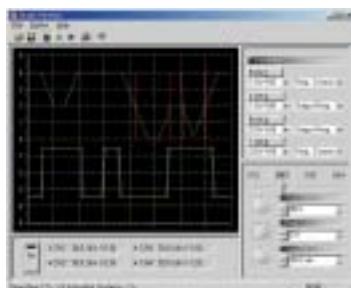

The control parameters and detailed functions for these boards are not shown until any of them is inserted.

Diversity of communication interfaces

The iS5 provides most popular communication interfaces such as Device Net, Profibus DP, Modbus-RTU, RS485 and F-Net (LS proprietary protocol for LS PLC communication).

The "Driveview™" software offers Window® based computer monitoring tool through RS-485 interface with graphic capture, keypad emulator, parameter edit, and text monitor. It is applicable for all LS inverters.

DeviceNet™
RS-485

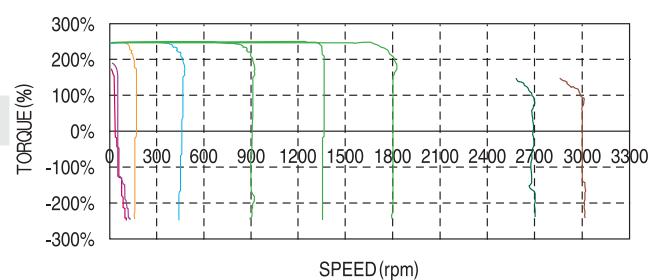

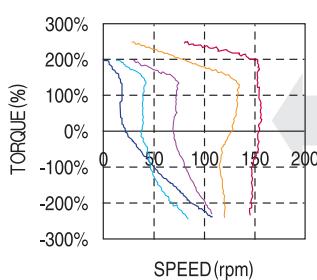

Built-in PID control

It is valuable in process control. The built-in PID algorithm controls flow, temperature, pressure, etc. through the proportional, integral and differential calculus between the feedback value and reference value in closed loop. The high speed CPU makes the calculation easy and fast.

Sensorless vector control

The iS5 adopts sensorless vector control algorithm, and it improves not only the torque control characteristics, but the speed controllability in an uncertain condition caused by the load variation as well.

The iS5 especially generates strong torque at a low speed range as shown below.

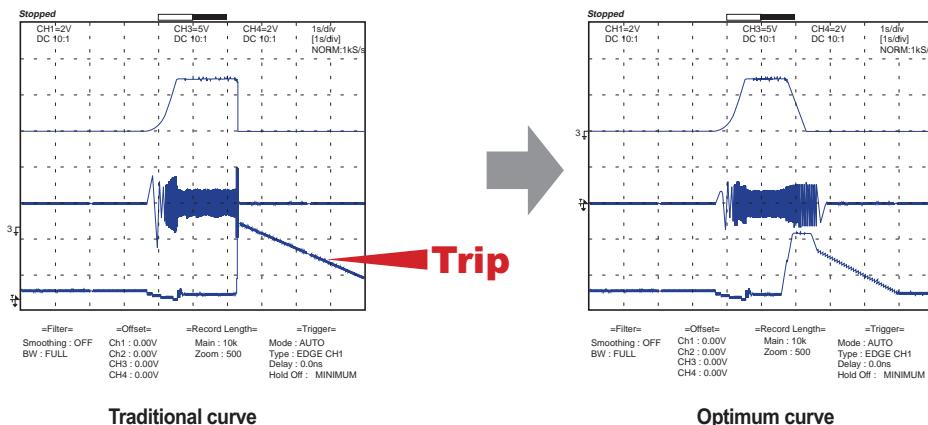

Auto tuning

The auto tuning algorithm in iS5 sets the motor factors automatically. It brings the traditional commissioning difficulties mainly in low speed by the load variation and the low torque generation to a settlement.

Optimum acceleration and deceleration

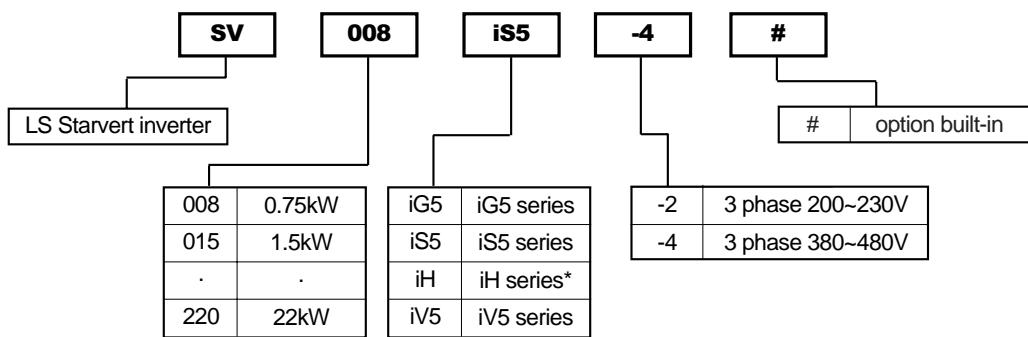

To make a maximum torque during the acceleration and deceleration, so called "trip free" function is acting during acceleration and deceleration. Both of Acceleration and deceleration may cause a trip in case that it is manually programmed. The 32-bit DSP CPU monitors the current transition during the acceleration and deceleration to program an optimum curve that is under the triptrigering level automatically.

Inverter rating selection guide

Application motor		200~230V	380~460V
KW	HP		
0.75	1	SV008iS5-2	SV008iS5-4

*1) Indicates the maximum applicable capacity when using 4 pole LS standard motor.

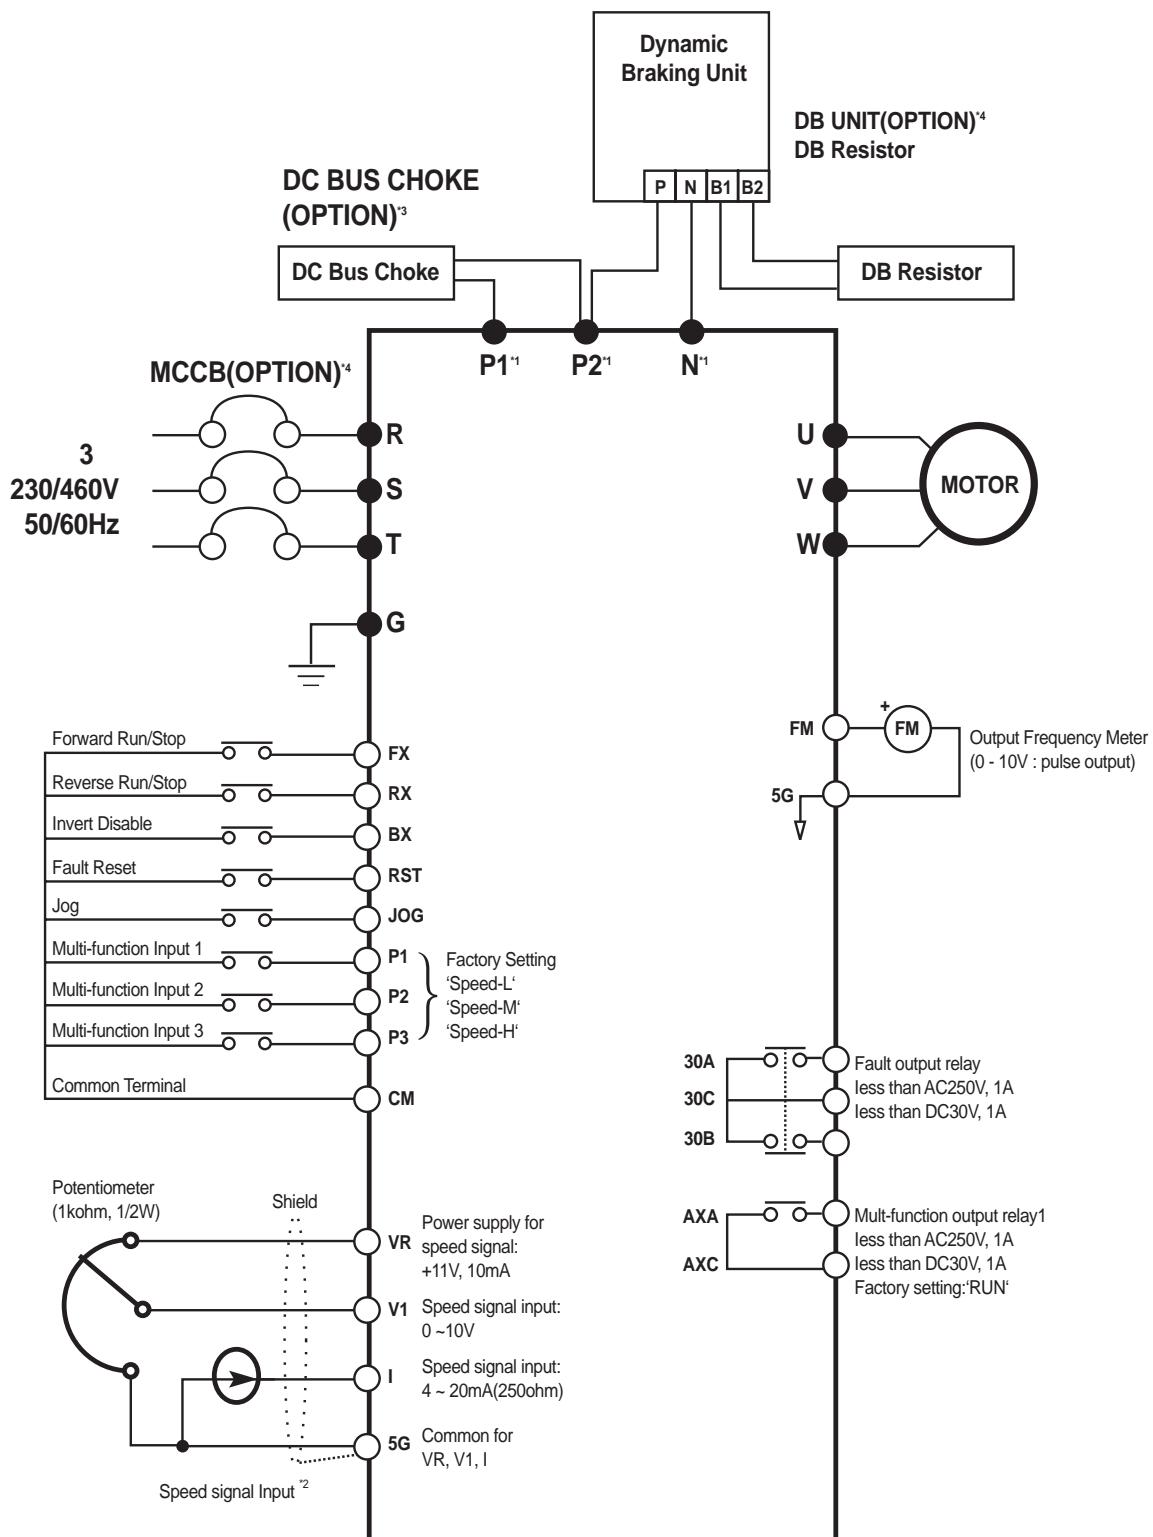

*2) Rated capacity (3*V¹⁾) is based on 220V for 200V class and 440V for 400V class.

*3) Maximum output voltage will not be greater than the input voltage. Output voltage less than the input voltage can be set.

*4) 0.75 ~ 3.7kW inverter have internal braking resistor inside. 5.5 ~ 75kW inverters need optional braking resistor.

Control	Control method	V/F control, sensorless vector control(selectable), sensed vector control
	Frequency setting resolution	Digital reference : 0.01 Hz (below 100 Hz), 0.1 Hz (over 100 Hz) Analog reference : 0.03 Hz / 50 Hz
	Frequency accuracy	Digital : 0.01% of max. output frequency Analog : 0.1% of max. output frequency
	V/F ratio	Linear, Square pattern, User V/F
	Overload capacity	150 % of rated current for 1 min., 200% of rated current for 0.5 sec. (characteristic is inversely proportional to time)
Operation	Torque boost	Manual torque boost (0 ~ 15 %), Auto torque boost
	Input signal	Operation method Key / terminal / communication operation
		Frequency setting Analog : 0 ~ 10V / 4 ~ 20 mA / Additional port for Sub-board (0 ~10V)
		Start signal forward, reverse
		Multi-step Up to 8 speeds can be set (use multi-function terminal)
		Multi-step accel/decel time 0 ~ 6,000 sec, up to 8 types can be set and selected for each setting (use the multi- function terminal), Accel/Decel pattern : linear pattern, U pattern, S pattern
		Emergency stop Interrupts the output of the inverter
		Jog Jog operation
		Auto operation Operates from internal sequence by setting the multi-function terminal (5way x 8step)Trip status is removed when protective function is active
	Fault signal	Fault reset active
Protective function	Output signal	Operation status Frequency level detection, Overload alarm, stalling, overvoltage, undervoltage, inverter overheating, running, stop, constant speed, exchange inverter to commercial line, speed searching, auto operation step, auto operation sequence
		Fault output Contact output (30A,30C,30B) - AC250V 1A, DC30V 1A
		Indicator Choose 1 from Output frequency, output current, output voltage, DC voltage (Output voltage: 0 ~ 10V)
		Operation function DC braking, frequency limit, frequency jump, second function, slip compensation, reverse rotation prevention, auto restart, exchange inverter to commercial line, auto-tuning, PID control
Display Keypad	Inverter trip	Overvoltage, undervoltage, overcurrent, fuse open, ground fault, inverter overheating, motor overheating, output phase loss, MC fail (over 30kW only), overload protection, external fault 1,2, communication error, loss of speed command, hardware fault, option fault etc.
	Inverter alarm	Stall prevention, overload alarm
	Momentary power loss	Less than 15 msec : continuous operation (over 30kW drives excluded), more than 15 msec : auto restart possible
Environment	Operation information	Output frequency, output current, output voltage, frequency value setting, operating speed, DC voltage
	Trip information	Indicates the fault when the protection function activates, memorizes up to 5 faults
Environment	Ambient temperature	-10 °C ~ 40 °C
	Storage temperature	-20 °C ~ 65 °C
	Ambient humidity	90 % RH max.(Non condensing)
	Altitude . Vibration	Below 1,000 m ² below 5.9m/sec ² (=0.6g)
	Application side	No corrosive gas, combustible gas, oil mist, or dust

Wiring

Note) " " display main circuit terminals, " " display control circuit terminals.

1. The terminal configuration varies depend on the model name.

'P' terminal is available in 5.5 to 7.5kW inverters. 'P1' and 'P2' are available in 11 to 75kW inverters.

'B1' and 'B2' terminals are for braking resistor or connection. 'P1' and 'P2' are for braking unit.

2. Analog speed command can be set by voltage, current and both of them.

3. When installing the DC Reactor, the common busbar between P1 and P2 must be removed.

4. 0.75 ~ 7.5kW inverters have on-board braking circuit. Braking resistor is only included for 0.75 ~ 3.7kW inverters.

11 ~ 75kW inverters need optional braking unit and resistor for dynamic braking.

5. Marked as "CM" for over 30kW drives.

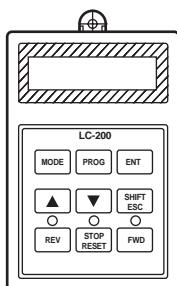

Power terminal configuration

Symbol	Function
R	AC Line input (3 phase, 200~230 Vac for "-2" units and 380~480 Vac for "-4" units)
S	
T	
U	
V	3 phase output terminals to motor
W	
P	Positive DC Bus Terminals, DC Bus Choke (reactor)connection terminals. These terminals are available for 5.5 to 7.5kW inverter with optional DB unit when an application need braking torque over 30% ED
P1	Positive DC Bus Terminals, DC Bus Choke (reactor)connection terminals. These terminals are available for 11 to 22kW inverter with optional DB unit. These terminal are shorted when DB unit is not applied.
P2	
B1	Dynamic braking resistor connection terminals. These terminals are available for 0.75 to 3.7kW inverters in order to connect an external braking resistor.
B2	
N	Negative DC Bus terminal
G	Chassis ground (The ground terminal ("G") may be located on heat sink instead of terminal strip depend on the model type)

Control terminal configuration

Type	Symbol	Name	Description
Input signal	P1, P2, P3	Multi function input 1,2,3	Used for multi function input. Factory default is set to step frequency 1, 2, 3.
	FX	Forward run command	Forward run when closed and stop when open.
	RX	Reverse run command	Reverse run when closed and stop when open.
	JOG	Jog frequency reference	Runs at jog frequency when the jog signal is ON. The direction is set by the FX (or BX) signal.
	BX	Emergency stop	When the BX signal is ON, the output of the inverter is cut off. When the motor uses an electrical brake to stop, BX is used to cut off the output signal. When the BX signal, which does not cut off by latching, is OFF and the FX signal (or the RX signal) is ON, the motor keeps running, so be cautious.
Analog/Digital	RST	Fault reset	Used to release the protective status when the protective circuit is active.
	CM	Sequence common	Used for the common terminal for contact input terminals.
	NC	-	Not used.
	VR	Frequency setting power (+12V)	Used as power for the analog frequency setting. Maximum output is +12V, 100mA.
	V1	Frequency reference (Voltage)	Used for frequency reference and uses 0-10V for input. Input resistance is 20 kΩ
	I	Frequency reference (Current)	Used for frequency reference and uses DC 4-20mA for input. Input resistance is 250Ω
Output signal	5G	Frequency setting common terminal	Common terminal for the analog frequency reference signal and the FM (for monitoring).
	FM	Analog/digital output (For external monitoring)	Outputs one of the followings: output frequency, output current, output voltage, DC link voltage. Factory default is set to output frequency. Maximum output voltage and output current is 0-12V, 1mA. Output frequency is set to 500Hz.
	30A,30C,30B	Fault contact output	Activates when the protective function is operating. AC250V 1A or less, DC30V 1A or less Fault : 30A-30C short (30B-30C open) Normal : 30B-30C short (30A-30C open)
Comm.	AXA,AXC	Multi-function output	Use after defining the multi-function output terminal. AC250V 1A or less, DC30V 1A or less.
	CN3	Communication port	Use the keypad connector. Use the keypad connector for RS232 communication. Disconnect the keypad and connect the RS232-RS485 converter for RS485 communication.

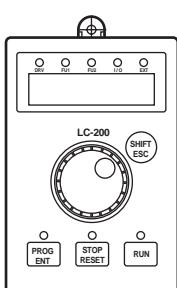

Keypad

1. LCD Keypad

Key/LED	Name	Description
MODE	Mode key	The mode button moves you through the seven program groups : DRV, FUN1, FUN2, I/O, (EXT), (COM) and APP.
PROG	Program key	The program button is used to go into programming mode to change data.
ENT	Enter key	The enter button is used to enter changed parameters.
UP	Up key	The up and down arrows are used to move through and change data.
DOWN	Down key	
SHIFT/ESC	Shift key	The button is used to move cursor across the display in a programming mode.
REW	Escape key	This button is used to move the program code to DRV00 from any program code.
STOP/RESET	Reverse key	The reverse run button is used to run the motor in reverse direction.
STOP/RESET	Stop key	The stop button is used to the drive from running.
RESET	Reset key	The reset button is used to reset faults.
FWD	Forward key	The forward run button is used to run the motor in forward direction.
REV	Forward run	The LED blinks when th inverter accels or decels.
STOP/RESET	Reverse run	The LED blinks when there is a fault.
FWD	Reverse key	The LED blinks when the inverter accels or decels.

2. LED Keypad (7-segment)

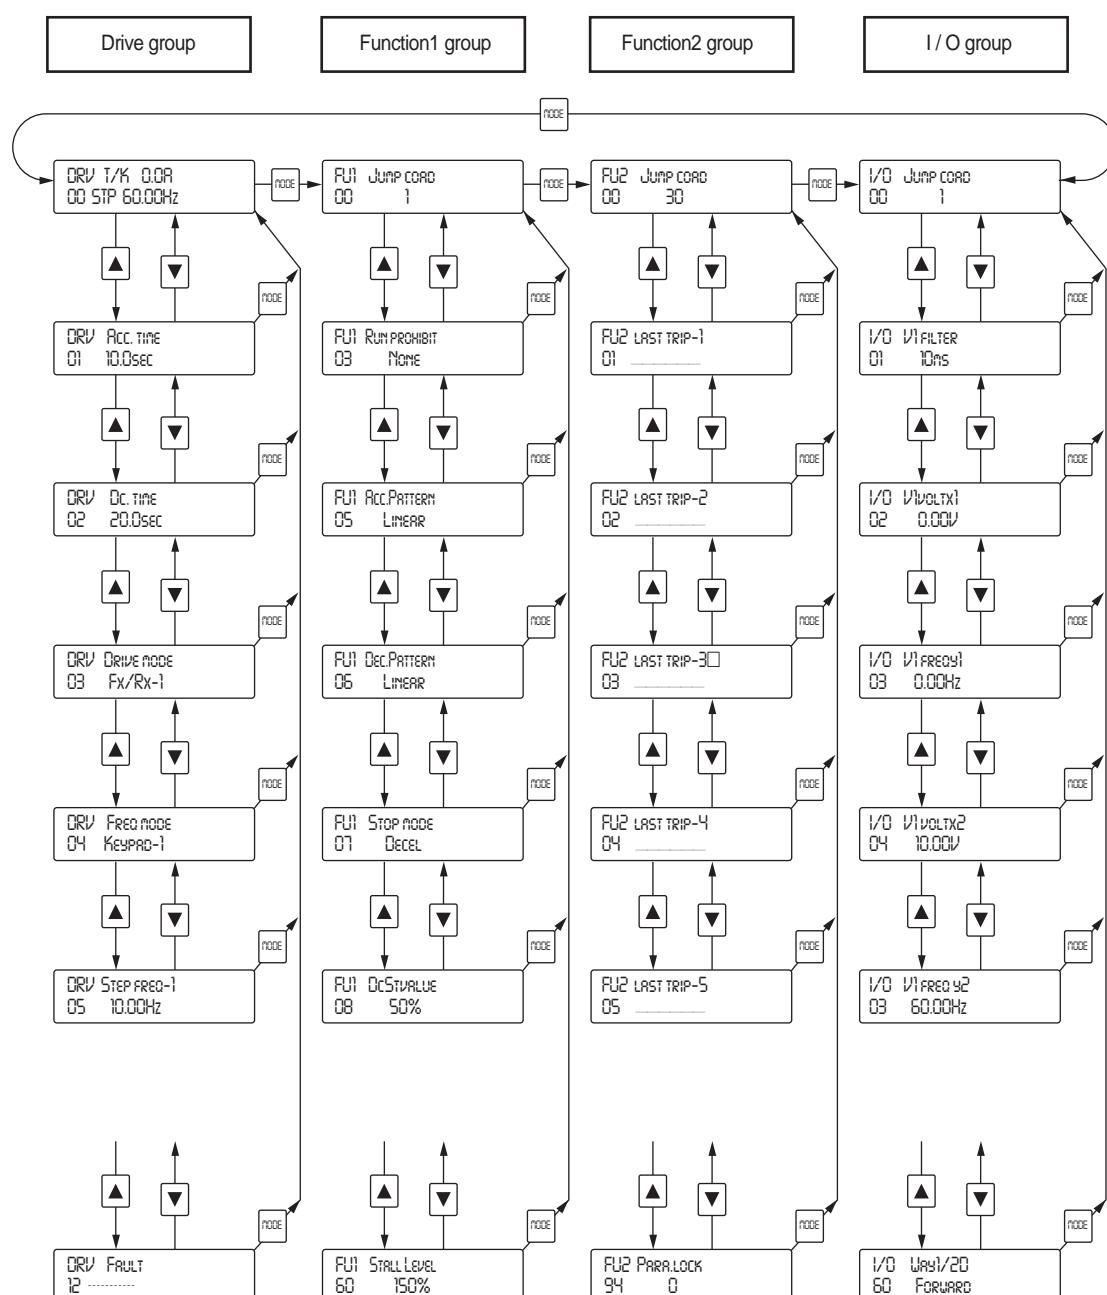

Encoder knob	Encoder Knob	This is used to move you through seven parameter groups and parameter codes. Also, used to change data by rotating knob.
SET	Set key	This is used to go into program mode to change data and to enter the changed data.
SHIFT/ESC	Shift key	This is used to go into program mode to change data and to enter the changed data.
REW	Escape key	This button is used to move cursor across the display in a programming mode.
STOP/RESET	Stop key	This is used to stop the inverter from running.The reset button is used to reset faults.
RESET	Reset key	This is used to run the inverter.
RUN	Run key	The motor direction is set in DRV13.
SET	Setting status	It blinks in setting mode.
STOP/RESET	Stop/Fault status	The LED is lit in Stop status and blinks in fault status.
RUN	Run status	The LED is lit in Run status and blinks in fault status.
DRV	Drive group	It blinks in drive group.
FU1	Function1 group	It blinks in Function1 group.
FU2	Function2 group	It blinks in Function2 group.
I/O	I/O group	It blinks in I/O group.
EXT	Sub-board group	It blinks in Sub-board group.
IO+EXT	Option-board group	It blinks in Option board group.
IO+EXT+FU2	Application group	It blinks in Application group.

Parameter group

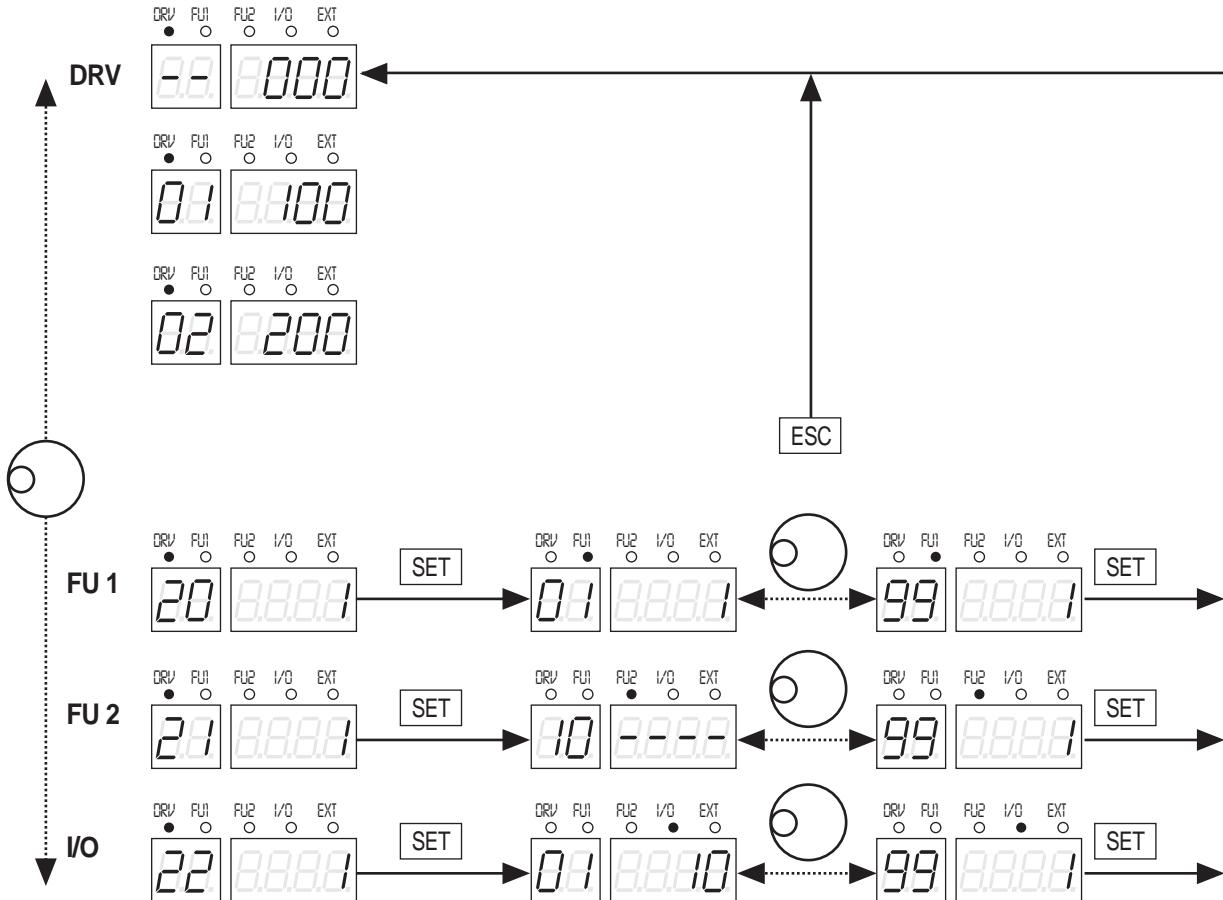

Parameter group	LCD keypad	7-segment keypad	Description
Drive	DRV	DRV LED is lit	Command frequency, accel/decel time, etc. Basic parameters.
Function 1	FU1	FU1 is lit	Max. frequency, amount of torque boost, etc. Basic function related parameters.
Function 2	FUN2	FU2 is lit	Frequency jumps, max./min. limit of frequency etc. Application function related parameters.
Input / Output	I/O	I/O is lit	Multi function terminal setting, auto operation etc. Parameter needed for sequence operation.
External board	EXT	EXT is lit	Displayed when sub-board is installed.
Communication	COM	I/O + EXT are lit	Displayed when option board is installed.
Application	APP	I/O + EXT + FU2 are lit	Specific application related parameters.

Parameter navigation

1. LCD Keypad

2. LED keypad (7-segment)

Operation method

Operation method	Function	Function setting
Keypad	Run/Stop command and frequency are set only through the keypad. Closing FX or RX terminal performs Run/Stop. Frequency reference is set through keypad	DRV 03 : Keypad DRV 04 : Keypad
Terminal	Run/Stop command and frequency are set only through the terminal. Closing FX or RX terminal performs Run/Stop. Frequency reference is set through V1 or I or V1+I terminal.	DRV 03 : Fx/Rx-1 or -2 DRV 04 : V1 or I or V1+I DRV 03 : Keypad-1 or -2 DRV 04 : V1 or I or V1+I
Keypad and Terminal	Closing Fx or RX terminal performs Run/Stop. Frequency reference is set through keypad.	DRV 03 : Fx/Rx-1 or -2 DRV 04 : Keypad-1 or -2
Option board	Operation using additional sub or option board. Sub board : SUB-A, SUB B, .. SUB-H Option board : Device Net, Synchro, Profibus DP, Digital-in, RS485, Modbus-RTU	DRV 03 : Fx/Rx-1 or -2 DRV 04 : Keypad-1 or -2

Program parameter descriptions

- [1] Code FU1-08 through FU1-11 appears only when FU1-07 is set at 'DC-brake'.
- [2] Code FU1-24 through FU1-25 appears only when FU1-23 is set at 'Yes'.
- [3] Code FU1-30 through FU1-37 appears only when FU1-29 is set at 'User V/F'.
- [4] Code FU1-51 through FU1-53 appears only when FU1-50 is set at 'Yes'.
- [5] Code FU2-11 through FU2-16 appears only when FU2-10 is set at 'Yes'.
- [6] The rated motor is automatically set according to the inverter model name. If different motor is used, set the rated motor capacity connected.
- [7] This value is automatically entered according to the rated motor set in FU2-30. If different, set the correct value as the motor.
- [8] The setting range of carrier frequency is decided depending on drives' capacity (over 30kW).
- [9] This value is automatically entered according to the rated motor set in FU2-30. If different, set the correct value as the motor.
- [10] Code FU2-47 through FU2-60 appears only when FU2-39 is set at 'PID'.
- [11] Code FU2-76 appears only when FU2-75 is set at 'Ext.DB-R'.
- [12] Code FU2-81 through FU2-90 appears only when one of I/O-12 ~ I/O-14 is set at '2nd function'.
- [13] Code O-46 through I/O-49 are used in Option Board like RS485, Device Net and F-net etc.
- [14] The 'Seq#' of code I/O-53 through I/O-60 varies according to the sequence number selected in I/O-51.

The parameter code may be extended to I/O-84 depend on the number of steps set in I/O-52 because the steps can be set up to 8.

	Resistor Value [Ω]	15 10 5	4.2	2.8	4030	20	16.9	11.4	8.4
Average Braking Torque	150%	150%	100%	100%	150%	150%	150%	100%	100%
Enable Duty (ED)	50%	50%			10%	10%	10%	10%	10%
Output Signal				Heat sink over-heat signal output					
Protection				Heat sink over-heat output cut-off					
Environment Ambient Temp.				-10°C ~ 40°C					
Humidity				Below 90% Relative Humidity (Non Condensing)					
Altitude				Less than 3,300ft (1,000m) without derating					
Cooling Method				Self-cooling					
Installation				Avoid corrosive gas, oil mist, flammable gas and dust					

*This resistor wattage is based on 150% braking torque and 5% ED. Double the wattage in case of using with 10% ED application.

Dynamic braking (DB)unit

1. Internal (built-in) resistors

The DB resistors are built-in for 0.75 ~ 3.7kW models.

Model Name	kW	Internal DB Resistor	ED / Continuous Braking time
SV008iS5-2	0.75	200 Ω, 100Watt	3% / 5seconds
SV015iS5-2	1.5	100 Ω, 100Watt	3% / 5seconds
SV022iS5-2	2.2	60 Ω, 100Watt	2% / 5seconds
SV037iS5-2	3.7	40 Ω, 100Watt	2% / 5seconds
SV008iS5-2	0.75	900 Ω, 100Watt	3% / 5seconds
SV015iS5-2	1.5	450 Ω, 100Watt	3% / 5seconds
SV022iS5-2	2.2	300 Ω, 100Watt	2% / 5seconds
SV037iS5-2	3.7	200 Ω, 100Watt	2% / 5seconds

*Above table is based on 100% braking torque

2.External (optional) resistors

Model Name	kW	DB Resistor (100% Braking Torque)	DB Resistor (150% Braking Torque)
SV008iS5-2	0.75	200 Ω, 100Watt	150 Ω, 150Watt
